

Albert Bolush

AI Systems Engineer · Cloud Engineer · Product Builder

Sweden · alb.bolush@gmail.com · [LinkedIn](#) · [Medium](#)

Summary

AI Systems Engineer and Product Builder with 7+ years of experience designing scalable backend systems, cloud-native infrastructure, and real-time digital products.

I specialize in building practical AI automation systems for companies: internal copilots, workflow agents, support automation, knowledge search, integrations, and tools that reduce repetitive manual work.

My background combines senior backend/cloud engineering with hands-on product execution. I have built systems using Node.js, TypeScript, PostgreSQL, GraphQL, AWS, GCP, Cloudflare, serverless architecture, and modern LLM-based automation.

Alongside engineering roles, I have launched and scaled my own products, including Foodhero with 20,000+ users and 50+ partner stores, and Shopamoji with 25,000+ installs.

I am focused on building AI-powered systems that connect to real business workflows, run reliably in production, and save teams time.

What I Build

Internal AI Systems

Company copilots, AI search over documents, internal assistants, admin automation, support tools, and workflow agents.

Workflow Automation

Automated follow-ups, ticket triage, CRM updates, reporting flows, onboarding flows, and integrations between business tools.

Cloud-Native Products

Scalable backend APIs, event-driven systems, realtime applications, serverless infrastructure, and production-ready product platforms.

End-to-End Products

From idea and architecture to backend, mobile app, dashboard, deployment, analytics, and growth.

Tech Stack

Backend / Cloud

Node.js · TypeScript · PostgreSQL · GraphQL · REST · Serverless · AWS · GCP · Cloudflare

AI / Automation

LLMs · AI Agents · Workflow Automation · Internal Copilots · Tool Integrations · Prompt Engineering

Infrastructure / DevOps

Docker · Terraform · GitHub Actions · CI/CD · Observability · Event-Driven Architecture

Frontend / Mobile

React · Vue.js · Flutter

Currently Exploring

Rust · High-performance backend systems · Advanced AI orchestration

Experience

Eletive · Senior Cloud Engineer

2023 – Present · Sweden

Senior Cloud Engineer working on scalable backend systems, cloud infrastructure, and AI-enabled engineering workflows.

- Architect and maintain event-driven backend systems using Node.js, TypeScript, and GraphQL
- Improve scalability, reliability, and performance across multi-cloud environments
- Work on infrastructure optimization, observability, and developer productivity
- Explore and integrate AI-driven automation into internal engineering workflows
- Contribute to architecture decisions across backend, cloud, and product systems

Zmarta Group · Tech Lead & Fullstack Developer

2019 – 2023 · Sweden

Tech Lead and Fullstack Developer building fintech products, microservices, and scalable internal systems.

- Led a team of 5 engineers delivering microservice-based fintech products
- Built and maintained backend services, APIs, frontend applications, and internal tools
- Implemented CI/CD and Infrastructure-as-Code pipelines to improve reliability and delivery speed
- Drove architectural improvements across distributed systems and cloud infrastructure
- Mentored engineers and improved development workflows across teams

Foodhero · Founder & Cloud Engineer

Oct 2024 – Present · Latvia / Remote

Founder and Cloud Engineer of Foodhero, a Too Good To Go–style food-saving platform connecting users with discounted surplus food from local stores.

- Built the product end-to-end across backend, mobile app, and partner dashboard
- Designed realtime architecture using GCP, Cloudflare, Firebase, and serverless infrastructure
- Built APIs, business logic, partner tools, and customer-facing product flows
- Scaled the platform to 20,000+ users and 50+ partner stores
- Owned product, architecture, delivery, partnerships, and growth

[foodhero.app](#) →

Shopamoji · Creator & Flutter Developer

2023 – Present

Creator of Shopamoji, a cross-platform shopping-list app with voice input, localization, notifications, and serverless backend integrations.

- Built and launched the app across Android and iOS
- Developed mobile UX, backend integrations, notifications, and localization flows
- Reached 25,000+ installs across platforms
- Managed product, development, release, and iteration independently

[Android](#) · [iOS](#)

Rephrase · Creator

2023 – Present

Creator of Rephrase, a Mac app that rephrases, corrects, and improves selected text system-wide.

- Built a lightweight AI writing assistant for everyday text improvement
- Developed with Flutter and AI integrations
- Designed for fast, universal text editing across apps

[rephrase.space](#) →

Gislaveds Kommun · System Developer

2018 · Sweden

System Developer building internal tools and SQL-driven applications for municipal operations.

- Developed internal web tools for administrative workflows
- Built SQL-based applications and data-driven systems
- Supported digitalization of internal municipal processes

Selected Projects

Foodhero

Food-saving marketplace connecting local stores with users looking for discounted surplus food.

Impact: 20,000+ users · 50+ partner stores

Stack: GCP · Cloudflare · Firebase · Serverless · Mobile · Realtime architecture

Shopamoji

Cross-platform grocery list app with voice input, reminders, localization, and mobile-first UX.

Impact: 25,000+ installs

Stack: Flutter · Serverless integrations · Android · iOS

Rephrase

Mac app for improving selected text system-wide using AI.

Stack: Flutter · AI integrations · macOS

Focus Areas

- AI automation for SaaS teams
- Internal copilots and workflow agents
- Support, admin, CRM, and operations automation
- Scalable backend and cloud architecture
- Event-driven systems and realtime products
- Product development from idea to launch
- Founder-led technical execution

Education

B.Sc. Computer Science — Transport & Telecommunication Institute, Riga

B.Sc. Sports Management — Latvian Sports Academy

Highlights

- 7+ years building backend, cloud, and product systems
- Senior Cloud Engineer with experience across AWS, GCP, and Cloudflare
- Built and scaled Foodhero to 20,000+ users and 50+ partner stores
- Created Shopamoji with 25,000+ installs across Android and iOS
- Experienced with Node.js, TypeScript, PostgreSQL, GraphQL, serverless, and event-driven architecture
- Focused on LLM-based automation, internal AI systems, and workflow agents
- Combine deep engineering skill with founder/product execution
